## Anglesight ANGLESIGHT™ Combat Lifesaver

The AngleSight is a tool that allows the optic to be used as a periscope. Using a side port of the Anglesight, targets may be engaged from a safe barrier / concealed position; then allows for a rapid transition to a shoulder fired engagement. The AngleSight is great for CQB and is also great for training: the instructor can view how the operator addresses the target while using the side port.

- Rotates 360 degrees for engagements at multiple angles.
- Weight: < 100 grams (<3.53oz)
- Operational Temperature: -30C to 70C (-22F to 158F)
- Storage Temperature: -39C to 100C (-38.2F to 212F)
- Compatible with holographic sights, red dot sights, night vision and laser designators
- Compatible with any caliber weapon that is fitted with a MIL STD 1913 / Picatinny Rail

## Commander Scope™

This 8X42 monocular is designed to replace binoculars currently used by military and law enforcement personnel. The light weight COMMANDERSCOPE™ is easily carried in a pouch on the user's MOLLE and can be rapidly deployed to quickly identify distances to the target. The COMMANDERSCOPE™ can eliminate the "double image" usually experienced with binoculars. Its large objective lens is designed for low light conditions and ideal for twilight and cloudy weather. The built in reticle allows for more accurate distance assessment and the built in compass makes it easy to acquire target azimuth measurements.

- Power: 8x
- Objective Lens: 42mm, Fully Coated
- Minimum Focus Distance: 7 degrees, 123m at 1000m or 369' at 1000 yards
- Eye Relief 18mm
- Size/Weight: 61 x 63 x 143mm/370 grams
